

## XV.ENDPOINT SECURITY MONITORING

### Aim:

To Learn about fundamentals, methodology, and tooling for endpoint security monitoring.

### Procedure:

1. Collect endpoint logs (Windows Event Logs, Sysmon).
2. Establish a baseline of normal system behavior.
3. Monitor processes, network activity, and user actions.
4. Correlate events across logs to detect anomalies.
5. Investigate, respond, and remediate threats.

### Tasks:

#### Task 1: Introduction

I have read the introduction task.

No answer needed

✓ Correct Answer

#### Task 2: Endpoint security fundamentals

What is the normal parent process of services.exe?

wininit.exe

✓ Correct Answer

What is the name of the network utility tool introduced in this task?

TCPView

✓ Correct Answer

#### Task 3: Endpoint Logging and Monitoring

Where do the Windows Event logs (.evtx files) typically reside?

C:\Windows\System32\winevt\Logs

✓ Correct Answer

Provide the command used to enter OSQuery CLI.

osqueryi

✓ Correct Answer

What does EDR mean? Provide the answer in lowercase.

endpoint detection and response

✓ Correct Answer

#### Task 4: Endpoint Log Analysis

Click on the green View Site button in this task to open the Static Site Lab and start investigating the threat by following the provided instructions.

No answer needed

✓ Correct Answer

Provide the flag for the simulated investigation activity.

THM{3ndp01nt\_s3cur1ty!}

✓ Correct Answer

#### Task 5: Conclusion

I have completed the Introduction to Endpoint Security Monitoring room.

No answer needed

✓ Correct Answer

#### Result:

Hence the fundamentals of Endpoint Security Monitoring has been completed.
